### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeff A. Holmen (Reg. No. 38,492) on August 12, 2004.

2. The application has been amended as follows:

Claims 34 and 36 are amended as following:

34. A system for providing interleaved access to a plurality of memories, the system comprising:

at least one map table including a plurality of entries, each entry including a plurality of entry items, each entry item identifying one of the memories;

a controller for receiving a first logical address, the first logical address including a plurality of address bits, the plurality of address bits including a first set of address bits corresponding to a first set of entries in the at least one map table, wherein ~~at least one~~ all of the entries in the first set includes first set includes a plurality of entries items that are different than entry items of other entries in the first set; and

wherein the controller is configured to identify a first entry in the first set of entries based on the first set and a second set of the address bits, and identify a first entry item in the first entry based on a third set of the address bits.

36. A method of accessing a plurality of memories in an interleaved manner using a contiguous logical address space, the method comprising:

providing at least one map table, the at least one map table including a plurality of entries, each entry including a plurality of entry items, each entry item identifying one of the memories;

receiving a first logical address, the first logical address including a plurality of address bits, the plurality of address bits including a first set of address bits corresponding to a first set of entries in the at least one map table, wherein ~~at least one~~ all of the entries in the first set includes a plurality of entries items that are different than entry items of other entries in the first set;

identifying a first entry in the first set of entries based on the first set and a second set of the address bits;

identifying a first entry item in the first entry based on a third set of the address bits; and

accessing the memory identified by the first entry item.
